

You can help the planet by turning off the lights!

On average, lights in a home make up 12% of a household's energy consumption. Household items like washing machines, televisions, lights, and refrigerators use up a lot of energy each month.

The first thing you can do is keep an eye out around your home for when lighting is being used unnecessarily. Is the light left on when no one in the room? Is there enough natural lighting? How long are lights being left on?

By using less electricity when you turn off the lights, less power is needed from power plants. With less demand, fewer harmful pollutants are released into the atmosphere and environment!

Utilize the windows in your home during the day to let in natural lighting. By avoiding electric lighting, you are saving SO much energy!

How can you help?

Energy efficiency activity!

FLIP THE SWITCH

A green sticky note with a black tab at the top, pinned to a white background. The note has a vertical line on the left side and contains the text: "Turn off the lights & save electricity!"

Turn off
the lights
& save
electricity!

- 1 Grab some sticky notes, colorful construction paper, or another form of paper.
- 2 Cut the paper into small squares, rectangles, or any other shape you like!
- 3 Use a coloring utensil to write a phrase that will encourage people to turn off the light when they leave the room.
- 4 Tape the paper beside the light switch so people can be reminded!
