

Conserve Maine Energy

In order of most positive impact:

REDUCE

If there are fewer resources consumed and less waste created to begin with, there will be less environmental counter-efforts needed to fix the negative effects of production. This is the most efficient method.

REUSE

By finding other ways to use the trash we've created again, we don't have to buy more, causing less waste!

RECYCLE

By disposing of things in a way that allows them to be sold again, you are creating less landfill waste!

To reduce, you can: use less, buy less, avoid extra waste, take shorter showers, carpool, buy in bulk, turn off the lights, unplug electronics, choose items with less packaging, and much more!
